Consider the utility of this wonderful invention. We are shown the every-day life of far-away countries which we may never hope to visit. Famous bits of natural scenery are brought home to us. Comfortably seated at the theatre we watch the raging of a storm on land or sea. By the flying leaves, tossing branches and dust clouds, or by the wild surging waters and driving spray we can measure 41s fury. We are interested, amused, and instructed.

At the western terminus of the Trac-tion Company's Broad-street line, near the lake at New Reservoir Park, a watt-ing-room for passengers is being built. This is quite a convenient arrangement for the public when a car is delayed a few

The Baltimore and Ohio Railroad Company has decided to maugurate on May 1st the tonnage system for handing its treight trains. For the past eight or nine months General Manager Greene has been experimenting along this line, and has arrived at the concision that the cost of operation may be decreased, to some extent, by using this plan. It is not expected that a very great gain will be made, as the B. and O. for the past year has over loading very close to the limit. The unit system will be the basis for operation on the tonnage system, the unit of weight being \$1-2 tons. When cars are loaded or received from other lines, the number of units of weight it contains will be planly marked on the side of the car so that the trainmen will have no difficulty in arriving at proper number of units to place in the train. The use of the unit system renders it very easy for trainmen to figure on just how many tons they are handling, and does away with the use of five and six figures in addition. When the great improvements to the track between Martinsburg and Cumberland are completed, more cars to the train can be handled over the Second Division. It is expected that the gain wer the entire system will be large enough to justify the adoption of the tonnage plan. COMMENCEMENT (XERCISES. Gladness Comes
